Social Inclusion in REDD+ Readiness
Regional sharing and capacity development workshop for (mainly) Anglophone countries in Africa

Nairobi, Kenya
Thursday 13th to Sunday 16th of December, 2012

Final Workshop Report
produced by the Facilitators (January 2013)
with additions / edits from the Organizers (March-April 2013)

This Workshop Report has been mainly developed by the workshop facilitators Michael Gachanja and Peter O’Hara. It focusses primarily on the outputs generated by workshop participants. The presentations made in the workshop by resource persons have already been distributed to participants electronically and in hard copy. These can be obtained from lead organizer of the workshop, Mr Kennan Rapp of the FCPF FMT, email krapp@worldbank.org. The materials related to the workshop process and many of the methods used can be obtained from the lead facilitator for the workshop, Mr Peter O’Hara, email: peterohara@participatorynrm.com

**Introduction**

Reducing Emissions from Deforestation and Forest Degradation (REDD+) is (or should be) a people-centred approach, aimed at empowering forest stakeholders, maximizing benefits, safeguarding livelihoods and minimizing the risks of linking climate finance to avoiding deforestation and degradation. Forests play a key role in the lives of many stakeholders – especially marginalized groups – and it is essential that their complex needs, interests and opinions are fully harnessed and respected during REDD+ Readiness and implementation so that REDD+ goes beyond the trees to enshrine equity and inclusion. Only equitable, socially inclusive approaches to avoided deforestation and degradation can generate the broad-based support they need to be feasible to implement, resilient, and sustainable.

As REDD+ is still new, countries are on steep learning curves with regards to how to meaningfully and practically engage and consider stakeholders in REDD+ Readiness and implementation. Relevant tools and approaches continue to evolve rapidly, and their interaction with program-specific requirements, UNFCCC guidance, international obligations, and country-specific norms and practices needs to be carefully considered.

This workshop, organized by the Forest Carbon Partnership Facility (FCPF), provided an opportunity for multi-stakeholder representatives from 7 African countries (Ethiopia, Ghana, Kenya, Liberia, Mozambique, Tanzania and Uganda) involved in REDD+ Readiness to take stock, analyse and share progress and challenges with regards to social inclusion in REDD+ Readiness. It also provided an opportunity to present and digest the latest FCPF guidance on topics related to social inclusion and, based on experiences in the workshop, think about practical, country-specific measures to enhance social inclusion in REDD+ Readiness.

The goal and objectives of the workshop were the following;

**Overall Goal:** Participants develop relevant and practical enhanced social inclusion measures and actions for REDD+ Readiness for their own countries.

The workshop had 3 main interconnected objectives to achieve the goal:

1. **Country context analysis.** To conduct country context analysis on the state of social inclusion in REDD+ Readiness and enable cross-country sharing.
2. **Enhancement tactics development.** To combine country experiences with FCPF guidance to develop enhanced measures and actions for social inclusion in REDD+ Readiness.
3. **Application/adaptation of tactics for country contexts:** Application and adaptation of relevant and practical measures and actions to enhance social inclusion in REDD+ Readiness, specifically tailored to country contexts.

Within the overall umbrella of social inclusion the workshop focused on three specific interrelated themes that are central to REDD+ Readiness and social inclusion as supported by the FCPF: (i) Consultation and Participation processes (C&P); (ii) Strategic Environmental and Social Assessment (SESA); and (iii) Feedback and Grievance Redress Mechanisms (FGRM).
Key Workshop Insights and Outputs

The purpose of this document is to provide key insights/outputs from each section of the workshop. Full detailed proceedings are available separately.

Preliminaries

- Opening remarks stressed the importance of forest resources as a livelihood resource for many stakeholders – particularly marginalized groups and thus the importance of ensuring that the interests and needs of these stakeholders are fully considered in REDD+ development and implementation.
- A synthesis of the needs assessment submitted by the country-based participants prior to the workshop was presented. Participants stated that their need for expertise strengthening was greatest with regards to Feedback, Grievance and Redress Mechanisms (FGRM), followed by SESA/ESMF and lastly C&P which they felt they had the most existing expertise in.
- An overview comparing and contrasting these three elements and showing how they are linked together was pointed out as being important to understand before proceeding into the three individual themes of the workshop.

Section A. Country sharing and analysis

Participants divided into country teams and collectively developed a vision of ideal social inclusion in REDD+ implementation, an analysis of the current status of social inclusion in REDD+ Readiness, and recommendations for enhancing practice to aim towards social inclusion in REDD+ implementation (the vision). Some key cross-cutting points that emerged included:

- **Consultation and Participation (C&P)** strengths to build on included some existing C&P plans, existing participatory forestry programmes and community/participatory forest management institutions as well as constitutional/legislative support for citizen participation (e.g. in Kenya and Mozambique). Weaknesses/challenges included resource and capacity constraints to fully operationalize C&P plans, as well as difficulties in identifying and reaching the most affected stakeholders.
- **Cross-country SESA/ESMF** strengths included numerous existing Environmental Impact Assessment (EIA) mechanisms/capacities in various countries, although deficiencies in strategic assessment mechanisms were common. Weaknesses/gaps included lack of resources, capacity and cross-sectoral coordination related to SESA for REDD+ as well as continued insecure community tenure and unclear benefit sharing mechanisms which were identified as a fundamental legal safeguard needed by communities potentially involved in REDD+ by many country teams.
- Regarding **FGRM**, strengths to build on included the existence of local traditional grievance resolution mechanisms as well as the existence of some legislation related to natural resource management dispute resolution. Weaknesses/gaps included insufficient development and testing of FGRM mechanisms/frameworks
specifically for REDD+ as well as lack of FGRM skills and knowledge among REDD+ facilitators. The disconnection between judicial existing systems within countries and forest resource-related disputes was also highlighted as well as lack of awareness of courts and law enforcement authorities on REDD+ -related disputes( both anticipated and current).

- General feedback on country sharing and analysis related to lack of specificity regarding analysis presented by participants. There was an expressed need for more specific information on Why? What and How? Who? and When?. Specific feedback included questions on how to make C&P more meaningfully participatory within constrained resources. There were several questions related to whether existing EIA mechanisms dealt with social issues and what are the specific capacity gaps to fill in existing dispute resolution mechanism so that they can be relevant to REDD+ FGRM, as this ‘gap’ was not clearly articulated.

Section B. REDD+ consultation and participation (C&P)

After an introductory presentation to C&P, participants were divided into multi-country teams and given different analytical frameworks to dissect different aspects of consultation and participation processes and mechanisms for REDD+. Some insights into the group outputs follow:

1. Regarding consultation, participation and communication tools for REDD+ Readiness a very wide array of tools were listed and matched to all key stakeholder groups; however the fewest suitable tools were identified for indigenous peoples and local forest dependent communities.

2. Regarding Rights, Responsibilities and Revenues it was agreed that an urgent task was to clarify forest rights, responsibilities and benefit sharing among stakeholders during REDD+ Readiness. Critical feedback on the analysis developed by the group suggested that the role/authority of government compared to communities in REDD+ decision making (e.g. regarding benefit sharing) was too strong and community role in decision making too weak. Another general criticism on the analysis was that the balance between rights, responsibilities and revenues for communities could be improved to a more equitable and attractive for communities – a better burden/benefit balance.

3. Regarding the process plan for Consultation and Participation the key generic steps developed by the group included: 1. Planning the process for participation in a national forum; 2. Preliminary visits to stakeholders to test participation approaches and understand field realities; 3. Comprehensive stakeholder mapping; 4. Selecting which participatory method for which stakeholder and then undertaking consultations with the different stakeholder groups to capture their interests; 5. Presenting the information generated to a multi-stakeholder validation workshop and finally; 6. Monitoring and evaluation – getting feedback from stakeholders on the quality of the consultation and participation process and revising the approach accordingly.

4. Regarding institutionalizing social inclusion in REDD+ enhancement of participatory facilitation skills was seen as essential within countries. With regards to institutional set-up it was agreed that as well as a national steering committee, secretariat and technical working groups there needed to be a network linking all affected and influential stakeholder groups, regular multi-stakeholder forums as well as and clear and transparent rules and procedures on
how decisions regarding REDD+ are taken and by whom (e.g. who has the right to decide on REDD+ benefit distribution and how is this decision taken?).

Section C. Strategic Environmental and Social Assessment (SESA/ESMF)

After an introductory presentation on SESA, participants were divided into multi-country teams to analyse different parts of a case study, which was a ToR for SESA in a hypothetical country. In a role play participants either presented their analysis of the ToR as ‘consultants’ or received and questioned the analysis delivered by the consultants as ‘ministers’. Some lessons generated during the presentation, discussions and role play included the following:

- **Regarding SESA/ESMF** key issues raised included the importance of developing SESA/ESMF in a meaningfully participatory and iterative way with affected stakeholders so that their interests and concerns were fully harnessed. A key function of SESA is its potential to build consensus around priority concerns and deal with trade-offs. Critical for SESA is to address the trade-off between forest preservation and access to forest resources. SESA should provide insights into the opportunity costs of forest conservation including payments for carbon and other co-benefits. Also, SESA should be an instrument for safeguarding social and environmental risks of REDD+ Readiness but also help stakeholders to address long-term outstanding issues such as land tenure or strategic issues such as benefit sharing. By identifying key problems, risks, trade-offs and gaps, SESA will shine light on the need for wider institutional and legal reforms that are needed for promoting sustainable development as well as safeguarding forest communities.

Section D. REDD+ Feedback and Grievance (FGRM)

After an introductory presentation on FGRM, participants were divided into country teams to conduct a capacity assessment of existing FGRM competencies within their countries and develop recommendations for enhancement. Some insights from the analysis follow:

- **Regarding FGRM capacity analysis** key cross-cutting issues that are leading to disputes in REDD+ Readiness include unclear forest tenure for communities, unclear REDD+ benefit sharing, concerns about continued access to forest resources for communities, high expectations by communities for REDD+ combined with slow progress to benefits and poor and often confusing information on REDD+. **Existing capacity strengths** related to some existing forest-related FGRM experiences and community institutions in place from existing participatory forestry initiatives as well as the multi-stakeholder dialogues that have taken place with regards to REDD+ issues so far which have helped to build understanding and relationships among stakeholders. **Weaknesses/gaps** included lack of specific expertise for REDD+ FGRM, lack of cross-sectoral coordinated mechanisms in place for REDD+ FGRM as well as numerous legislative, policy and implementation gaps when it came to linking disputes to appropriate agencies to deal with them. The numerous challenges related to clarifying and securing forest tenure for forest-dependent communities and the need to develop clear and agreed benefit-sharing mechanisms was again stated.
as a fundamental gap which needed to be filled to avert many REDD+-related disputes. **Recommendations for investment to build FGRM capacity** included need for specific capacity assessment and development on REDD+ FGRM skills and development of clear guidelines on REDD+ FGRM (note: the latter has been completed and is available on the FCPF website). The need to clarify approaches to tenure and benefit sharing in REDD+ was emphasised as a priority during REDD+ Readiness. A way to efficiently strengthen capacity was seen as orienting/sensitising the existing systems on REDD+ FGRM and linking them into REDD+ Readiness and implementation processes. Effective institutionalised multi-stakeholder participation and communication on REDD+ was also seen as a priority recommendation to effectively address FGRM challenges – so linked back to the C&P and the SESA mechanisms. Note that on numerous occasions during the group work in the three thematic sessions the overlap/interdependence of C&P, SESA and FGRM emerged.

### Section E. Application/adaptation

A role play taking the form of a multi-stakeholder debate generated various recommendations for key strategies needed to enhance social inclusion in REDD+. Discussion around these recommendations was stimulated using an auction method for ranking, in which country teams (except for Mozambique) were paired up and asked to agree on priorities. The resultant overall collective ranking of these recommendations follow (in order):

1. Development of transparent FGRM through an iterative process.

   This was followed by two recommendations that received the same prioritisation value:

2. Clarify forest tenure for forest-dependent people, and ensure REDD+ programmes provide continued access to forest resources for local people, preserving and enhancing their livelihoods.

3. Informed and inclusive SESA process (For those countries that already have a SESA, this might require the SESA being revisited and redeveloped in a more participatory way).

4. Far-reaching consultation and communication strategy – reaching most affected stakeholders – on the entire REDD+ process, which also clarifies costs and benefits of REDD+ and ensures the voice of the affected are heard.

5. Strengthened application of SESA and risk management safeguards and institutionalisation of SESA.

Drawing on lessons from the entire workshop, short action plans were developed by country teams aimed at enhancing their existing REDD+ Readiness activities and plans within the next 12 months to promote more effective social mainstreaming into REDD+. Key summary recommendations from each country team follow:
Ethiopia:

**C&P:** Development of a full REDD+ consultation and participation strategy. Testing the strategy in pilots and adapting it based on practical experience.

**SESA:** Development of a detailed REDD+ SESA, build capacity on SESA and then conduct pilots to test the SESA mechanism and revise based on experience. Based on lessons from experience develop the SESA framework for REDD+ implementation.

**FGRM:** Need to build a sustained link between existing community based forest management groups and national level decision makers in networks/forums and to have a national level multi-stakeholder workshop to agree on the ToR for a REDD+ dispute resolution body and the mode of its operation.

Ghana:

**C&P:** Operationalize the C&P plan. Finalize the REDD+ communication strategy and conduct a stakeholder validation of the communication strategy and revise accordingly before implementation.

**SESA:** Procure consultants, who; a) initiate analysis of existing forest tenure, b) prepare a work plan for the full development of a draft SESA, c) share the draft SESA for input from affected stakeholders and revise based on inputs.

**FGRM:** Procure consultants who, a) conduct gap analysis, b) design a pilot to test FGRM strategy, c) conduct stakeholder validation of tested FGRM strategy and d) design FGRM mechanism. A parallel activity will be to build capacity on FGRM during all these steps.

Kenya:

**C&P:** Develop a communication strategy in a consultative process and develop guidelines to support the operationalization of the C&P plan.

**SESA:** Finalize the SESA TOR, develop a roadmap for SESA development, convene a stakeholder consultation to develop the SESA and finalize SESA institutional management arrangements.

**FGRM:** Undertake a situational analysis to better understand dispute issues around REDD+ and existing capacities in FGRM – the findings are then used to feed into appropriate REDD+ FGRM development – both the content of the mechanism but also the capacity development required to execute it.

Liberia:

**C&P:** Review the existing C&P plan with stakeholders to address any weaknesses. After revision roll-out/operationalize the C&P plan.
SESA: Validate the existing SESA TOR with stakeholders, support a process for stakeholder input into developing a full SESA and then incorporate these stakeholder inputs to develop the national REDD+ SESA.

FGRM: Conduct a gap analysis to inform the design/redesign of a FGRM mechanism, then pilot and test the FGRM mechanism before finally integrating the lessons from the pilot into the final design of the FGRM.

Mozambique:

C&P: Translation pending.
SESA: Translation pending.
FGRM: Translation pending.

Tanzania:

C&P: Strengthening the zonal outreach plan through; a). Capacity building of zonal officials on facilitating participation and reporting, b). Identification and targeting of stakeholders not reached in the first consultations and c). broadening the variety of media used when implementing the REDD+ communication strategy.

SESA: Employing a highly participatory approach in developing REDD+ safeguards that ensure that stakeholder interests are carefully considered.

FGRM: Identifying existing FGRM capacities and gaps in a gap analysis exercise. Strengthen the capacity in FGRM to fill the gaps. Develop a cost effective, result based mechanism that will guide REDD+ FGRM implementation.

Uganda:

C&P: Utilise existing forest related institutions to implement the a) C&P plan, b) Awareness raising and communication plan and c) Conflict and grievance strategy.

SESA: Fundraise for SESA development. Include the SESA in the draft Climate Change policy. Develop institutional framework and local capacity to conduct SESA. Utilise the proposed awareness raising strategy(C&P) to spread information on the SESA.

FGRM: Improve the existing mechanisms and capacities related to FGRM and work with and through existing CSOs and media to develop and implement the FGRM.
Workshop Evaluation Results

Photo: The workshop evaluation was done using a target scoring method – ‘X’s towards the centre of the target indicate a higher evaluation for that element of the workshop (labelled around the circumference). Resource persons and facilitators excused themselves and left the training hall during the evaluation.

The dynamic and participatory workshop facilitation, approach and methods seemed to have been generally valued by participants. The Country Sharing and Analysis, Consultation and Participation and SESA sessions were also evaluated well. Although still well above average, the weekend sessions on FGRM and Application/Adaptation fared a little less well in the evaluation.

There were very few criticisms made regarding contents of the workshops – rather the overwhelmingly stated dislikes about the workshop were organisational and timing related issues.

It was considered that the workshop was too condensed – too much in too short a period of time. Organising the workshop over a weekend was felt to be inconsiderate for participants who had to return to work directly after the workshop. The per diem was considered to be too low, especially before an upward revision in the amount was made. Participants felt that flight arrangements prior to the workshop could have been
organised in a different way, as for some flights were finalised at the last minute. Although information required from some participants to arrange their flights had also arrived quite late to the organizers, despite numerous requests.

Even with the issues regarding the inappropriate timeframe and condensed nature of the workshop, the participants should be commended for working hard all the way through and right to the end – even on the weekend. It must be noted that it was their energy and sharing of expertise that primarily made the workshop a success!

**Recommendations for next time**

The workshop organizers and facilitators have greatly valued the feedback provided and will digest and discuss how to improve the workshop. Initial thoughts from the facilitators on enhancements for next time include the following:

**Logistics, organisation and timing**

- **Flights and logistics.** Is it possible to make flight arrangements in a different way – by working through World Bank Country Offices, for example?
- **Per diem information.** Explanation of per diem rates prior to the workshop to avoid issues with unfulfilled expectations.
- **Lengthen training to 5 days and have it Monday to Friday.** Lengthening the workshop by one day to make it 5 days, providing a more conducive pace and ensuring that the workshop runs from a Monday to Friday to be considerate to participants. At least one of the days should finish early to allow for some relaxation and sightseeing.
- **Local organizational/administrative support.** Suggest to hire a local assistant(s) to help with pre-workshop and during workshop logistics such as photocopying, arranging materials and purchasing materials and general support to the organization team and facilitators and participants.
- **Dedicated note taker.** It is very difficult for facilitators to both facilitate and record the proceedings of this type of workshop – especially the valuable discussion and debate sessions. It is suggested that a system be worked out, or a person or persons be identified to serve as dedicated note takers.

**Methodological/design aspects of the training**

- **Unpacking the overfull last day.** Restructuring the workshop, limiting the last day of the workshop only to prioritisation of recommendations, action planning and presentation of action plans and moving the role play back to the second to last day. The last day of the workshop simply had too much going on this time and people were tired when they came to action planning, when it is important to dedicate sufficient time and energy to this very important final output.
- **Avoiding overlap through better integration into overall structure.** Revisions in some of the sessions/exercises to avoid overlap and to better integrate all thematic sessions into the overall structure and flow of the workshop, e.g. avoiding too much overlap in the country sharing and analysis exercise, the FGRM country level analysis and planning exercise and the final country level action planning.
• **Clarifying overarching linkages between C&P, SESA and FGRM themes.** An exercise/session should be developed to better clarify the complementary nature of these three elements, cross-cutting aspects as well as identify what activities should best fall under each. The development of such an overarching framework would help in positioning the contents of the 3 thematic sessions in relation to the other themes and minimise unnecessary overlap in group work within the three thematic sessions (e.g. listing the same C&P activities in the group work in all three thematic sessions).

• **The R-PP process timeline clarification.** This R-PP process timeline would need to be refined and clarified to minimize confusion during this session.

• **Auction ranking.** This method, if used at all next time, should begin with individual country team prioritisation of recommendations.

**Next steps**

• **Tweaking and improvement.** All resource persons, facilitators and organizers reflect upon their contributions, taking any negatives on the chin and constructively reworking their contributions individually and as a team to improve the workshop for next time. This reflection and revision should take place prior to the next workshop.

• **Communication after workshop.** If possible develop a mechanism for electronic sharing of progress for peer review among participants after the workshop to keep the momentum, sharing and peer review going.
Workshop Proceedings

Preliminaries

Session 1. Welcome and Opening Remarks

The welcome remarks were made by (i) Johannes Zutt, the World Bank Country Director for Kenya and other East African countries, and (ii) Gideon Gathaara, the Conservation Secretary in the Ministry of Forestry and Wildlife. In their welcome, they highlighted the following issues. That:

- Kenya has lost a lot of forests since independence. This may have contributed to the drought shock that has been experienced over the last 5 years.
- Forests are very central to lives of people within the region and at global level where over 1 billion people depend directly on them.
- Because of this importance, Kenya in particular has emphasized forest conservation in its policies including in the Constitution and Vision 2030, where it seeks to increase/raise the forest cover to 10% of its land area.
- Impacts of poor forest management are being felt in Kenya and other countries and hence the current efforts including through REDD+ that are being made to halt deforestation.
- Social inclusion in REDD+ is extremely important because of the high dependence of people on forest resources so this workshop topic is an important one.
- The World Bank is very glad to bring together key actors from 7 African countries participating in this workshop to share together efforts to strengthen social inclusion in REDD+.

Session 2. Introductions of participants, expectations

Participants all paired up with someone from another country and asked each other the following questions;

1. Name
2. Organisation
3. Country
4. Direct current role related to REDD+ if applicable.
5. Expectation: In one sentence what they would most like from this workshop.

Many of the expectations were related to learning from other countries’ experiences, guidance related to REDD+ SESA and REDD+ FRGM.

The needs assessment synthesis, based on a needs assessment questionnaire that participants had filled prior to the workshop, was shared. Participants felt they needed more expertise particularly on FGRM, followed by SESA, then finally C&P which they felt they had the most existing expertise in.
Figure. Needs assessment (Number of participants who felt they fell into each category of expertise, is listed in the bar chart).

3. Workshop norms, rationale, objectives and agenda.

After a presentation on the workshop objectives and agenda, country teams were allocated different tasks they would be responsible for, either Time Keeping (using time cards), Recap of relevant lessons (which were presented each morning) and the Social team (which were responsible for energizers). The teams were rotated each day. The feedback wall was also introduced where participants could write feedback during the workshop so that the organizers could redress any concerns during the workshop (The feedback is listed in the final Evaluation section of the proceedings).

The presentation focused on the following contents;

- Provided an overview of FCPF objectives, structure and governance.
- REDD+ Readiness Fund: Country participation status.
- R-PP contents.
- Overview of why key elements of the workshop are important to REDD+ and what are the key characteristics of C&P, SESA and FGRM in REDD+
- Comparing the basics of the three elements.

A point raised after the presentation was that the end of the presentation was a little rushed (due to short time allocation) and more time should be spent understanding the inter-linkages between the three elements (C&P, SESA and FGRM) more, before moving on to examine the individual elements themselves.
A. Country Sharing and Analysis

Session 5. Country team fit on REDD+ readiness process line

As a way to stimulate discussion within country teams as well as to orient all participants on the progress of each country team, country teams were asked to organize themselves along an R-PP spectrum placed on the wall. Where the country teams located themselves is indicated on the figure that follows.

After locating themselves, country team representatives then had to explain what they have completed in the R-PP process and what is coming next. See the notes below on the perceptions of where the teams believe they are in the process.

**Ethiopia**
- Is selecting REDD+ pilot initiatives
- Grant agreement signed in September 2012.
- SESA plan yet to be developed.

**Ghana**
- R-PP approved.
- Readiness grant in place.
- ToRs for various activities (SESA, FGRM) ready and consultants to undertake the work are being sought.
- Seven pilots being implemented.
- Waiting to do a mid-term report in order to get supplementary agreement.

**Kenya**
- R-PP approved.
- SESA ToR developed.
- Waiting for the signing of the Readiness grant agreement.
Liberia
- Grant agreement signed
- ToR for REDD pilot projects being prepared.

Mozambique
- Mozambique has completed the R-PP document.
- The R-PP has not been implemented yet until funds received from the World Bank.

Tanzania
- R-PP approved in 2010 and under implementation.
- Have been making annual reports and are in between annual reporting and R-packaging.
- Currently preparing MRV.
- Piloting of REDD+ on-going.
- A regional safeguards [study] being prepared.

Uganda
- R-PP has been prepared and approved.
- Implementation framework, MRV and reference scenario has been developed.
- Resource mobilization plan has been done to supplement World Bank funding.
- Waiting to sign the supplementary grant agreement.

Although the exercise did stimulate a lot of discussion within country teams as intended, the labeling also did create some unnecessary confusion, especially around the term 'R-PP progress report', which created confusion as there are different kinds of progress report (annual and mid-term). Some revisions on the terminology and adding arrows to the spectrum on the wall to signify different phases in the process was recommended.

5. Country social inclusion in REDD+ visioning and Strength Weaknesses and Recommendations Analysis.

Participants were divided into country teams and provided with pre-prepared flip charts and frameworks to use for analysis of progress and develop recommendations regarding social inclusion in REDD.

Teams first drew a vision of an ideal scenario with regards to social inclusion in REDD+, using no words (See photos on next page). They then conducted the Strengths, Weaknesses and Recommendations analysis.
Photos. Two visions of ‘ideal socially inclusive REDD+’ developed by the Tanzania and Ethiopian country teams. These visions were then explained and comments/questions provided on yellow post-its by other participants.

After developing their vision, the country teams then conducted an analysis of the strengths and weaknesses of existing mechanisms for social inclusion (C&P, SESA and FGRM) and developed recommendations that tackled the weaknesses and/or built on the strengths. As with the visions, after presentation comments and questions were provided by other participants on post-its.

The analysis per country is presented in the following frameworks, with the comments on post-its highlighted in red.
Current strengths, weaknesses and recommendations with regards to social inclusion mechanisms.

</table>
After the comments were placed, country teams were given an opportunity to review the comments, digest them and then give responses.

Photo. Country teams have time to digest comments before responding, one of the benefits of the poster with post-it method over direct verbal questions.

At the end of section A, country teams were reminded to consider lessons of relevance in the subsequent sessions that could meet challenges identified in their country analysis.

**B. REDD+ Consultation and Participation**

After a recap of relevant lessons by the assigned country teams, the consultation and participation thematic session of the workshop began with an introductory presentation.

**Session 10. Introductory Guidance and Insights into REDD+ Consultation and Participation.**

The presentation included the following:

- The purpose and goal of consultation in REDD+ readiness.
- Guidance on conducting consultations including the need to be adaptive and responsive.
- The distinction between consultation and communication.
- Need for documentation and feedback.
- Overview of the REDD+ C&P process building blocks, inputs, activities and outcomes.
- Testimony—quotations of positive impact of C&P on REDD+ in different countries.
Session 11. Multi-country group work; REDD+ C&P enhancement tactics

Four multi-country groups were formed tasked with using different analytical frameworks for deep analysis of C&P aspects that are necessary for effective REDD+ readiness. The following four analytical frameworks were used.

1) Matching tools/mechanisms to stakeholders for consultation, participation and communication in REDD+ readiness.
2) Stakeholder rights, responsibilities and revenues in REDD+.
3) Process plan preparing for meaningful participation, consultation and communication in REDD+.
4) Institutionalisation of Consultation and Participation

Group Presentations

Group 1: Participation, Consultation and Communication Methods

This group identified 10 forest stakeholders (restriction to 10 was made for the sake of the exercise) and using arrows matched them with appropriate participation, consultation and communication measures. They were tasked with finding appropriate means of communication and participation and consultation for each stakeholder group. The table below provides a list of participation, consultation and communication measures and categories of stakeholders identified. The photograph that follows shows the many connections identified between tools/methods and stakeholders.

### Group 2: Rights, Responsibilities and Revenues

Getting the balance right among rights, responsibilities and revenues is key to ensuring social justice in REDD+ implementation. Group 2 initially identified ideal rights, responsibilities and revenues for stakeholders during REDD+ implementation then worked back to identify what had to be done during REDD+ readiness to achieve such a balance.

<table>

</tbody>
</table>
Recommendations regarding rights during REDD+ readiness

- Clear definition of rights for different stakeholders is necessary
- There is need to analyze all the stakeholders and their level of relevance in REDD+ and allocate rights accordingly.
- Need of clear communication mechanism to ensure all are aware of their rights.

Recommendations regarding responsibilities during REDD+ readiness

- There is need to define roles of the stakeholders and putting in place of a monitoring system for compliance of roles and responsibilities.
- Development of specific legislation tools to formalize and enforce responsibilities.

Recommendations reading revenues/benefits during REDD+ readiness

- Development of national guidelines that promote levels of transparency, involvement and accountability on benefit sharing.
- Ensure disclosure to benefits for stakeholders.
- Benefits to be determined by Government.

Group 3: Planning the process of participation

This group focused on developing the key generic process steps in a good Consultation and Participation plan.

<table>
<thead>
<tr>
<th>Ideal Key Process steps</th>
<th>Purpose of steps – what do you want to achieve by this step? The result of participation</th>
<th>Which stakeholders should be involved</th>
</tr>
</thead>
<tbody>
<tr>
<td>Planning the process for participation during a national dialogue to discuss REDD+ readiness issues</td>

</tr>
</tbody>
</table>
Consultative meetings, training needs assessment and choice of participation methods

- Gender mainstreaming
- Free, Prior and Informed Consent (FPIC)
- Capacity building
- Use of appropriate participatory methods
- Legitimacy

Stakeholder validation workshop

- Women engagement
- Policy engagement

Monitoring and evaluation

- Feedback from stakeholders

Group 4: Institutionalizing Social Inclusion in REDD+

This analytical framework was designed to develop measures to ensure that participation and consultation were not just one-off activities, a tick-box exercise only related to REDD+ but rather that they become engrained within the institutions and policy processes related to the forest sector. This multi-country group started by describing what institutionalization of consultation and participation would look like in REDD+ implementation and then developed recommendations on how to reach this during the REDD+ readiness phase.

<table>
<thead>
<tr>
<th>Ideal skills needed for social inclusion in REDD+ implementation</th>
<th>Ideal institutional arrangements to ensure meaningful participation in REDD+ implementation</th>
<th>Ideal policy and legislation in REDD+ implementation</th>
</tr>
</thead>
</table>
| - Communication

- Cultural sensitivity  
- Knowledge on participatory forest management  
- Negotiation skills including mediation | - Focal institutions for REDD+  
- Networks  
- National steering committee  
- Secretariat  
- Technical working group  
- Clear institutional rules on participation and how decisions are going to be adopted  
- Working group systems  
- Gender groups | - Good participatory forest management legal framework  
- Clear organizational structure established through appropriate policy/law  
- Clear implementation policy and guidelines for REDD+ |

Recommendations for steps during REDD+ readiness to do with skills.

- Capacity development at all levels on facilitation,

Recommendations for steps during REDD+ readiness to do with institutions.

- Support to capacity building and representation processes of

Recommendations for steps during REDD+ readiness to do with policy and legislation.

- Analyze how customary and formal government community land
participation, consultation, negotiation and mediation.

- Bio-cultural community protocols for indigenous people developed.
- Establish teams with required skills to facilitate stakeholder processes.

- Communities and CSOs so that they can be a strong institution themselves.
- Build feedback mechanisms into institutional arrangements.
- Financial and technical resources to establish appropriate institutions.
- ToRs for institutions and procedures for inter-institutional communication.
- Cross institutional representative arrangements.
- Communication and information strategy prepared.
- Tenure interact develop recommendations to feed into policy and legislation that clarifies tenure.
- Draft legal and policy framework for community tenure over forests.
- Develop policy and guidelines for all aspects of REDD+ implementation including ensuring ongoing consultation and participation.

The outputs were presented for peer review using a rotating panel method where participants from different groups gave critical feedback and evaluated the presentations by other groups according to different criteria (See photo below).

Photo: Peer review of presentations using the rotating panel method.
C. REDD+ Strategic Environment and Social Assessment (SESA/ESMF)

Session 13. FCPF guidance/insights into strategic environment and social assessment (SESA) and the associated environmental and social management framework (ESMF) for REDD+ readiness

An introductory presentation was given by Fernando Loayza, Sr. Environmental Specialist, World Bank. This presentation covered some of the following:

- The purpose of SESA in REDD+, as a framework for managing and mitigating environmental and social risks and impacts for future investments associated with implementing the country’s REDD+ strategy.
- Process steps for developing the SESA.
- Overview of World Bank safeguard policies.
- Guidance on form of SESA; including legal regulatory and policy regime within which the strategy will be implemented, potential environment and social impacts, management arrangements and the importance of ensuring SESA development in a consultative and iterative process.

Session 15. Multi-Country Group Work: REDD- SESA/ESMF Macondo Case Study analysis clinic Exercise

A case study analysis/role play method was used to help internalize lessons related to SESA development in a practical way. A hypothetical case study was introduced around a fictitious country, Macondo. The country context was described:

The context of Macondo.
Between 1943-1993 deforestation in Macondo was rampant and almost 40% of its forest was lost. By the middle of the 1990s deforestation was reversed but since threats have emerged:
- Conversion to agricultural land particularly in the North
- Infrastructure development and construction of hydropower plants
- Illegal logging
- Forest Fires

The REDD+ Readiness Preparation proposal (R-PP) was approved and by mid-2012 completed the preparation of the SESA ToR (a copy of which was shared with participants).

The participants were then divided into four groups to analyze the R-PP SESA TOR. It was explained that after the analysis some of the groups would be playing the role of a government minister to listen to the results of the analysis and recommendations regarding the TOR, the other groups would play the role of consultants advising the minister. Which group would play which role would not be decided until after the case study analysis.

- Groups 1 and 3 addressed the following questions focusing on the “launching” and “scoping” sections of the Macondo SESA ToR.
  - Will benefits and costs of alternative land uses be assessed in the SESA to decide in a participatory way whether or not is convenient for Macondo to establish forest carbon stocks?
• How will the SESA process ensure ownership of the SESA results by all key stakeholders?
• What are the two major analytical and participatory strengths of the proposed SESA?
• Are there some major weaknesses in the proposed ToR or they are good enough for Macondo to go ahead with this proposal?
• Two specific recommendations to the Minister for his meeting with the President

• Groups 2 and 4 addressed the following questions focusing on the “assessment” and “ESMF” sections of the Macondo SESA ToR.
  • Does the SESA process help in selecting and refining the REDD+ strategy options of Macondo?
  • Does the SESA process contribute to establish an equitable distribution of benefits among forest users, landowners, investors and the government?
  • Is the SESA providing enough information to strengthen Macondo’s management of environmental and social impacts from the implementation of the REDD+ Strategy?
  • Are there some major weaknesses in the proposed ToR or they are good enough for Macondo to go ahead with this proposal?
  • Two specific recommendations to the Minister for his meeting with the President

Presentation of the analysis

The Minister is concerned about the REDD+ readiness process of Macondo and wants to be briefed by consultants on an analysis of the SESA TOR.

Roles were decided by tossing a coin where the 2 rapporteurs played the role of consultant and another for the role of minister. Members of the group supported their rapporteurs. The discussion that followed during the role play, allowed the participants to interrogate each other’s understanding and analysis of the ToRs further – posing questions and answers to each other in a role play set up where the minister sat at one desk with the consultants at an opposing desk.

Some of the specific points raised about the Macondo SESA TOR to the ‘minister’ and recommendations include;

  • A good SESA will be important to ensure the sustainability of REDD+ project considering the social and environmental aspects.
  • The SESA process will be useful in addressing the opportunity cost of establishing carbon stock.
  • This SESA TOR does seem to propose a cost effective set of safeguards for the country to be part of the global Climate Change agenda.
  • The TOR may be OK to adopt as a working document – that should be improved upon – recommendations for improvement are listed in the following points.
  • Ensure that the Macondo community benefit from REDD+ this should be strengthened in the TOR
  • Point out the essence of social inclusion within readiness process within the TOR.
  • The TOR also needs to be strengthened by including provision for SESA capacity building and specific reference to gender.
After the exercise, there was a wrap up where comments/reflections on the results of the role play exercise were provided.

**D. REDD+ Feedback & Grievance Redress Mechanism**

This section, delivered by Amar Inamdar and Marie Brown of the World Bank, began with an introductory presentation followed by an open discussion. Some of the key topics covered in the presentation included:

- Recap of the issues/gaps regarding FGRM identified by participants.
- Advice on risks and anticipation of grievances.
- Common process steps in developing a REDD+ grievance mechanism.
- Integration of FGRM into other REDD+ mechanisms.
- Tools for identifying and managing risk of conflict, for FGRM capacity assessment and for evaluating FGRM (contained in handouts).
- A case study of a GRM evaluation in Mexico was presented.

The participants were then divided into their country teams and using an analysis framework conducted an FGRM capacity assessment within their own countries. The results of the assessment were then presented in plenary. The analysis is presented in the following matrices.
Capacity assessment of REDD+ readiness FGRM mechanisms in the participating countries.

1. Country: Uganda

<table>

9. Lack of knowledge to come up with effective REDD+ projects
10. Distribution of benefits inequitable
11. Cultural rights and cultural beliefs clashing with REDD+

After the presentation of outputs, participants and resource persons continued an open discussion—in the open air, under a tree, on emerging key issues regarding FGRM development, guidance and country experience sharing on causes of disputes and FGRM mechanisms.
3. Application and Adaptation of Workshop Lessons

Session 20. REDD+ social inclusion role play

The role play was designed to enable participants to review outputs of the workshop and present, justify and debate priorities for enhancing social inclusion in REDD+ in a more realistic scenario. It also was designed to enable participants to ‘step into the shoes’ of different stakeholders to better understand priorities from different perspectives.

The role play context was introduced (note that the characteristics in the hypothetical country of Gambezi were modeled on common issues that emerged in the contexts of participants’ countries)

Hypothetical role play country: Gambezi

- Gambezi is a typical African country that has similarities regarding many of the REDD+ readiness issues raised in the workshop.
- Land tenure is very unclear – forest communities have traditional rights over the forest, but officially all forest is government owned.
- Gambezi has finished its R-PP and a C&P plan and SESA/ESMF ToR – but they haven’t been implemented yet, they are only on paper.
- NGOs in Gambezi state that they provide a voice for communities and thus have been key in developing the R-PP along with government.
- The main criticism is that whilst developing the R-PP and C&P and SESA framework, so called community representatives were selected in a chaotic way by a technical working group and invited to conventional workshops. These ‘representatives’ were presented technical information but were not meaningfully engaged. As a result REDD+ options and pilot strategies did not match the real underlying drivers identified by communities – and especially the most affected marginalized groups within them.
- These consultations were a one-off exercises to develop the R-PP. There has been little in the way of community stakeholder involvement so far in R-PP implementation.
- The SESA ToR was developed by consultants – looks very nice but not ‘owned’ or institutionalised in the country – some say it was done as a ‘tick box’ exercise so that the government could secure the funds from the World Bank.
- The FRGM has not yet been developed – but is badly needed!

Role play scenario:

The World Bank has organized a multi-stakeholder workshop so that stakeholders can analyze, present and debate strategies for enhancing their existing REDD+ preparedness in a way that will make REDD+ implementation more socially inclusive and just.

If the strategies are meaningful, specific, logical, timebound (1 year) and cost effective then the World Bank is prepared to offer up to US$600K to fund those strategies.

It is the last day of the workshop – and various ideas (see outputs on the walls) have been generated over the last three days for strategies to enhance social inclusion – related to Consultation and Participation, SESA and FGRM. But the World Bank has still not decided if they will fund any strategy or which strategy to fund – because they are not strongly
convinced about the justification, cost effectiveness and specifics (lots of vague terms like 'capacity building' – not saying why, how, or who in the strategies).

Participants were divided into 4 stakeholder groups to discuss and make recommendations with justifications for Gambezi – but had to step into the 'shoes' of the stakeholder group they were assigned to, present recommendations from the perspective of that group.

1. Forest communities
2. NGOs
3. Forest Department.

Stakeholder group presentations on key recommendations for priority strategies to enhance social inclusion in REDD+ and justifications were made in a debate and are highlighted in the following table:

<table>
<thead>
<tr>
<th>Stakeholder group</th>
<th>Recommendation</th>
<th>Justification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Local Communities</td>
<td>They need to be fully engaged, they need to know more about REDD+ and know what the costs and benefits really are for them.</td>
<td>Local communities have the right to be fully engaged as it is their forest, they will be the most affected. NGOs do not speak for communities, they have their own interests in REDD+, communities can speak on their own behalf. Donors should work more directly with community organizations and not 'middle men' NGOs.</td>
</tr>
<tr>
<td></td>
<td>Continued access to forest and resources and services. REDD+ needs to preserve and enhance livelihoods including forest based livelihoods.</td>
<td>The communities have ancestral rights to the forest, their livelihoods depend on the forest and they are guardians of the forest. Cutting communities off from the forest in REDD+ would be a big mistake as would conserving the forest at the expense of the livelihoods of the local people.</td>
</tr>
<tr>
<td>NGOs</td>
<td>Develop standard guidelines for participatory REDD+ readiness process at all levels that will promote high level of involvement, transparency and accountability during implementation.</td>
<td>When standardized, it promotes cost effectiveness, transparency and accountability. Clear MRV protocols for MRV promotes social benefits.</td>
</tr>
</tbody>
</table>
| Government – Forestry department | Informed and inclusive SESA process revisited | • Feedback received and lessons learnt  
• SESA gives opportunities to address gaps in stakeholder engagement  
• Refine REDD+ strategy options  
• Decision making on strategy options is well informed by good analysis, opportunity costs and benefits. |
|———|———|———|
| | Develop inclusive and transparent FGRM through an interactive process (gap analysis, consult, develop specific pilots and refine) | • Mitigate risks  
• Ensure acceptability  
• There is an opportunity to improve and implement FGRM  
• Keep stakeholders happy  
• Transparency on which grievances can be addressed. |
| Donor | Enhance stakeholder engagement | • Gender must be mainstreamed  
• Cultural issues have to be respected  
• Insufficient ownership of the REDD+ process has to be rectified  
• We have to avoid the disenfranchisement of vulnerable stakeholders who often rely most on the forest but who’s voice is last to be heard. |
| | Strengthen application of safeguards and risk management beyond safeguards | • Land tenure issues have to be sorted out  
• Benefit sharing must be equitable and clear  
• Transparent process is essential for governance of REDD+  
• Need to include IPs/community rights into REDD+ |
The presentations and discussions were made using a ‘fishbowl’ debate method which is a free flowing but structured open debate method that provides equal opportunity but also equal time allocation for all participants to take part. See photo below.

Photo: The use of the fishbowl debate in this session was also designed to illustrate the suitability of the method for a multi-stakeholder debate.

As well as the recommendations and justifications being presented and debated, the debate widened to include various contentious topics including criticisms of NGOs from communities capturing the benefits in REDD+ readiness.

Session 21. Priority ranking of strategies to meaningfully enhance social inclusion in REDD+

To encourage country teams to digest the key outputs of the workshop, provoke discussion on prioritization and internalize which REDD+ social inclusion strategies were of most priority for them an ‘auction ranking’ method was used.

Firstly key recommendations for social inclusion were synthesized from the previous role play. Country teams (except Mozambique) were paired up to discuss the priority of the recommendations. Secondly an auction was held where each team was allocated a fixed number of credits (100). Each team was asked to buy as the recommendations for social inclusion that they felt was the highest priority, with the recommendation going to the highest bidder. As the amount paid was deducted from the credits, teams had to think very carefully about how much they would be prepared to pay, to ensure they had sufficient credit left over to purchase other recommendations.

Auctions provide a general indication of the collective value of ‘products’ in this case how high a priority the recommendations for social inclusion in REDD+ were.

The following is the collective outcome of the auction – and provides some indication of what the collective priorities are according to the country teams present in the workshop. It is worth noting, however, that no hard and fast conclusions can be drawn from the outcomes of
this exercise. Although the pairing countries up during the auction ranking exercise certainly provoked lots of discussion, it also led to indecisiveness during the auction which could well have affected the accuracy of the prioritization.

<td>6</td>
</tr>
</tbody>
</table>

**Country Team Action Plans**

The country teams were again asked to review outputs from the workshop and then develop an action plan aimed at the enhancement of the REDD+ readiness process to make REDD+ readiness more socially inclusive. The action plans were developed on pre-prepared matrices that follow. Again comments were placed on post-its. Some of these comments are included in 'red' within the matrices that follow, please note that some comments were undecipherable in the photographs of the outputs that were taken for documentation, so not all comments/questions are included.

Workshop Evaluation

The workshop evaluation in the following provides direct feedback and evaluation from participants. Comments were collected throughout the workshop using the feedback sheets, these comments are listed in section A. below. The end of workshop evaluation scores and comments can be found in the following Section B.

A. Feedback sheets.

These sheets (see photo below) were placed on the wall for continuous feedback during the workshop.

Photo: Feedback sheets – What I like? What I dislike?

What I like?

- Course content is good, but course too compressed.
- Very good presentations.
- Very good participation.
- Ranjith has done a great job!
- I like the post-it on poster method.
- I liked the Fish Bowl method!
- SESA
- Compliance with time frames.
- I liked the good Kenyan food!

What I don’t like?

Dissatisfaction with Daily Subsistence Rate

- I don’t like the DSA rate
- Address the DSA
- Please deal with the Per Diem issue.
• Insignificant Per Diem.
• The Per Diem is an insult – please address it
• Though the DSA rate was doubled, the participants are still not satisfied.

**Holding workshop over weekend not convenient**

• Weekend taken over!!! Free weekend is necessary to get ready for the weekend work ahead.
• Organization of the workshop over the weekend is bad.
• Next workshop should not go beyond Friday.
• Last day on a workshop should be a half day.

**Workshop too compact**

• Adult workshop should not be too compact.
• Adult learning – needs space for recreation.
• Full agenda with no time to enjoy the country.
• Short time for discussion.

**Complaints about poor food and warn training room.**

• The food is causing stomach upsets!
• Very bad food.
• The training room is too hot, it makes me sleepy.
• Does the Air Conditioning work?
• Need a room for recreation

**Workshop final evaluation.**

This was done with a target scoring method – the results are presented in two formats in the following.

**Workshop Evaluation Scores**

**Figure:** Numbers indicate how many people evaluated the workshop elements according to a specific grade from excellent to terrible.
Figure: Workshop evaluation scores compiled on a bar chart

What the participants thought was the best aspect of the workshop was the workshop facilitation, methods and approach, followed by the country sharing and analysis section of the workshop, the consultation and participation session, the SESA/ESMF session, the FGRM session, the application and adaptation session and finally the workshop organization and logistics.

Comments on the evaluation are presented in the following;

**Final workshop evaluation - comments**

**Positive aspects**

- Facilitation methods were good for allowing all to engage
- Excellent tools were used in the workshop itself, and these tools can be practically applied after the workshop for social inclusion.
- Good flow of presentations/exercises
- Having Mozambique in one language group during the workshop was good to allow flow and interaction

**Negative aspects**

- Working over weekends not good
- Too much work load for each day
- Too much in too little time
- The workshop was too long
- Any productive workshop should end at a reasonable time
- Participants were unduly stressed as the programme was too tight
- Tight schedule which was tiring
- Per DM should be improved in future workshops
- Improve on transparency in Per DM
- Ticketing for the flights was not good was not good

**Recommendations for next time**

**Timing issues**
- Have more days for the workshop
- Spread things out more
- Give people enough time to digest information
- More time and attention should be given to country specific presentations – they should be enabled to provide more detail
- The last day of the workshop should be a half day
- Do not have workshop on weekend

**Per Diem improvement**
- Per DM should be based on international standards
- Diversify food options and give people per DM for dinner as opposed to paying full board
- Good motivation (Per Diem) next time.
- There should be sharing of much information as possible on Per Diems to avoid raising expectations and speculation

**Ticketing/transport**
- Provide clear and timely logistical information before the workshop.
- Logistical arrangements such as transportation and invitation should be made ahead of time
- Devolve responsibility for flight arrangements to WB country offices.
- Per-inform participants on logistics( transport)

**Content issues**
- Use of practical examples is important
- Training language/terminology should be simple

**Other**
- Initiate a continuous communication with all participants after the workshop
- Pre-reading documents should be continued
- A lot of paper was wasted, there is need to be climate smart and use emails more
- Inclusion of an excursion to a relevant site
- Venue should not be very isolated and should be near the city
- Give participants certificates.
Closing Remarks and next steps

Closing remarks were made provided by Mr. Kenn Rapp of the FCPF who acknowledged the contribution of all who took part in and organized the workshop, emphasized that the organizers would be responsive to the useful feedback in the evaluation in improving the workshop for next time and finally stated the importance of the follow up task after the workshop. This task is that it is essential that country teams with their colleagues (REDD+ technical working groups, etc.) develop more detailed enhancement plans for Social inclusion in REDD+ readiness and share with the FCPF after the workshop.

Representatives from all the country teams then gave final closing remarks and reiterated some of the points made in the evaluation, particularly that they found the workshop very participatory and dynamic, the contents were generally good but that the schedule was too compact and consideration for participants should be made with regards to avoiding having the training workshop over a weekend. Generally everyone was happy with the training – main issues to be remedied included the Per Diem issue and the timing issues.
Annex 1. Structure and agenda for the workshop

Preliminaries

Outcome: Basic familiarity, context, rationale, purpose, outcomes of the workshop understood, rules and mechanisms to devolve responsibilities to participants.

A. Country sharing & analysis:
   Participant sharing and analysis of country contexts.
   Outcome: Country teams identify their vision, strengths and challenges regarding social inclusion in REDD+ shared and analyzed by country teams and cross cutting issues identified.

E Application/adaption.

Outcome: Prioritise and link lessons from the workshop applying lessons from the workshop adapted to their specific context to enhance social inclusion in REDD+ readiness.

Outcome: Multi-country – country teams digest FCPF guidance and combine with personal experiences to develop thematic measures/actions that are tailored to the key cross cutting issues identified in component A.

Wrap up.

Outcome: Any next steps after the workshop clear with milestones. Reflection/evaluation on workshop
